

**IN THE CLAIMS**

Please amend the claims as follows:

Claim 1 (Currently Amended): An electrophotographic apparatus comprising:

an electrophotographic photoconductor;

a charger, which charges ~~for charging~~ the electrophotographic photoconductor;

a light irradiator, which irradiates ~~for irradiating~~ a write light having a resolution of 600 dpi or greater to a surface of the electrophotographic photoconductor charged by the charger with an exposure energy of 5 erg/cm<sup>2</sup> or less, thereby forming a latent electrostatic image;

a developer, which feeds ~~for feeding~~ a developing agent to the latent electrostatic image within 200 msec after the surface of the electrophotographic photoconductor was irradiated with the write light, thereby visualizing the latent electrostatic image to form a toner image; and

a transfer, which transfers ~~for transferring~~ the toner image formed by the developer onto a transfer material, wherein

~~a surface of the electrophotographic photoconductor exposed by the light irradiator is configured to reach the developer within 200 msec or less;~~

~~the light irradiator is configured to irradiate with an exposure energy of 5 erg/cm<sup>2</sup> or less on the surface of the electrophotographic photoconductor when the write light has a resolution of 600 dpi or greater;~~

the electrophotographic photoconductor comprises a charge generation layer and a charge transport layer stacked in this order on a conductive support, and

the charge generation layer contains titanyl phthalocyanine crystals having, as a diffraction peak ( $\pm 0.2^\circ$ ) of Bragg angle  $2\theta$  with respect to CuK $\alpha$  ray (wavelength: 1.542 angstrom), a maximum diffraction peak at least at  $27.2^\circ$ , main peaks at  $9.4^\circ$ ,  $9.6^\circ$  and  $24.0^\circ$ ,

and a peak at  $7.3^{\circ}$  as a diffraction peak on the lowest angle side, and not having a peak within a range of from  $7.4^{\circ}$  to  $9.3^{\circ}$ .

Claim 2 (Previously Presented): An electrophotographic apparatus according to Claim 1, wherein the titanyl phthalocyanine crystals have a peak other than at  $26.3^{\circ}$ .

Claim 3 (Previously Presented): An electrophotographic apparatus according to Claim 1, wherein the titanyl phthalocyanine crystals have an average primary particle diameter of less than  $0.3\ \mu\text{m}$ .

Claim 4 (Original): An electrophotographic apparatus according to Claim 1, wherein the charge transport layer contains at least a polycarbonate having, on the main chain and/or side chain thereof, a triarylamine structure.

Claim 5 (Currently Amended): An electrophotographic apparatus according to Claim 1, wherein the electrophotographic photoconductor further comprising a protective layer on the charge transport layer.

Claim 6 (Previously Presented): An electrophotographic apparatus according to Claim 5, wherein the protective layer contains one of an inorganic pigment or a metal oxide, each having a specific resistance of  $10^{10}\ \Omega\cdot\text{cm}$  or greater.

Claim 7 (Original): An electrophotographic apparatus according to Claim 1, wherein the charge transport layer of the electrophotographic photoconductor has been formed using a non-halogen solvent.

Claim 8 (Previously Presented): An electrophotographic apparatus according to Claim 7, wherein the non-halogen solvent is at least one solvent selected from the group consisting of cyclic ethers and aromatic hydrocarbons.

Claim 9 (Original): An electrophotographic apparatus according to Claim 1, wherein the conductive support of the electrophotographic photoconductor has an anodized surface.

Claim 10 (Previously Presented): An electrophotographic apparatus according to Claim 1, further comprising a plurality of image forming elements each comprising the charger, the light irradiator, the developer, the transfer and the electrophotographic photoconductor.

Claim 11 (Original): An electrophotographic apparatus according to Claim 1, wherein as the charger of the electrophotographic apparatus, a contact charging system is employed.

Claim 12 (Original): An electrophotographic apparatus according to Claim 1, wherein as the charger of the electrophotographic apparatus, a non-contact proximal charging system is employed.

Claim 13 (Currently Amended): An electrophotographic apparatus according to Claim 1, wherein a gap between a charging member of the charger and the electrophotographic photoconductor is 200  $\mu\text{m}$  or less.

Claim 14 (Currently Amended): An electrophotographic apparatus according to Claim 1, wherein the charger of the electrophotographic apparatus is configured to be applied a alternating superposed alternating voltage.

Claim 15 (Currently Amended): An electrophotographic apparatus according to Claim 1, wherein the electrophotographic apparatus comprises ~~installed therein~~, a freely detachable process cartridge in which the electrophotographic photoconductor is integral with at least one unit selected from the group consisting of the charger, the light irradiator, the developer and ~~the~~ a cleaner.

Claims 16-20 (Canceled).
